                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              STAT-60 reagent (Tel-Test, Friendswood, TX) and the poly(A) + RNA was obtained by two rounds of purification with the Oligotex mRNA isolation kit (Giagen) according to the manufacturer's instructions. The libraries were constructed by B. Ferguson and R. Woods essentially as described by the manufacturer's instructions provided with the SuperScript Plasmid System (Invitrogen, cat. no. 18748-013). Briefly, imcg of poly(A) + RNA was annealed at C37 degrees with 10mcg of NotI-tag-dr18 oligonucleotide (GCTGCTGCGGCCC-tag-T18) and reverse transcribed at C37 degrees with SuperScript I (Invitrogen) reverse transcribed at transcriptes (Jiang et al., 2001). The 'tag' represents a transcriptes (Jiang et al., 2001). The 'tag' represents a transcriptes (Jiang et al., 2001). The 'tag' represents a transcriptes (Jiang et al., 2001).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   while not registered have known Angus pedigrees going back at least 4 generations. Samples collected: The samples consisted of the following: germinal vesicle-stage cocytes; in vitro derived embryos (2-cell, morula,

Second strand synthesis was performed with T4 DNA polymerase in the presence of DNA ligase and RNase H. After second strand synthesis, the double-stranded cDNAs were ligated to SalI adapters (Invitrogen-Life Technologies). The cDNAs derived from cach developmental stage of a particular tissue were selected by passage through cDNA size fractionation columns (Invitrogen-Life technologies). The cDNAs derived from each developmental stage of a particular tissue were mixed on an equinolar basis and ligated directionally into the Notl and SalI sites of the pCNA-SPORTG vector (Invitrogen). After ligation of the inserts, the plasmids were electroporated into DH108 bacteria. Library Construction (PCR Protocol): The amount of kRNA that was recovered from cocytes and embryos was quite limiting and standard protocol. Therefore, PCR-based protocol was recovered from cocytes and embryos was not sufficient for library production with the standard protocol. Therefore, PCR-based protocol was utilized for producing libraries from sources in which among transcribed with a NotI-tag-dTH3 oligonucleotide and embryos). Poly-A RNA was isolated by using the Micropoly (A) Pure kit from Ambon (cat. # 1918). The mRNA was reverse transcribed with a NotI-tag-dTH3 oligonucleotide and a SMART oligonucleotides were used as primers to amplify the cDNAs by PCR with pfu turbo polymerase (Stratagene). The resulting PCR products were purified oby using Chrome Spin-100 columns (1907) and polymerase (Stratagene). The resulting PCR products were fractionated by using Chrome Spin-100 columns (1907) spontal RNA contaminary Library were analyzed by restriction digestion to determine average insert size (96 clones) and by sequencing (-4 96 -well plates) to confirm library quality (e.g. the presence of short polya+ tails genomic DNA contamination (must be <14,), tibosomal RNA columns and by sequencing (-4 96 -well plates) to confirm library genomic DNA contamination (must be <14,), tibosomal RNA columns of the libraries, equal NA contamination (must be < BA, Mathialagan N, Prather RS, Lucy MC (2001) Constructing CDNA libraries with fewer clones that contain long poly (dA) tails. Biotechniques 31:38-42. Soares MB, MF Banaldo, P Jelene, L Su, L Lawton, A Efstrantiadis. 1994. Construction and characterization of a normalized cDNA library were pooled to produce a single mixed library (mega-library) for more extensive sequencing.
Bioinformatics work was performed by GK Springer's bioinformatics group (spoilen WG, Topinka CM, Khambati AA) in Computer Science at the University of Missouri-Columbia. Clone Requests: Requests for clones should be made to the Director of the University of Missouri DNA Core facility at: bovine@rnet.missouri.edu. was not sufficient for library production with the standard protocol. Therefore, PCR-based protocol was utilized for producing libraries from sources in which the amount of extracted mRNA was small (Occytes and embryos). Poly-A RNA was isolated by using the MicroPoly(A) Pure kit from Ambion (cat. # 1918). The mRNA was reverse transcribed with a Not1-tag-dT18 oligonucleotide and a SMART oligonucleotide and a SMART oligonucleotide. Sequence complementary to the SMART oligonucleotides were used swithin the SMART and dT oligonucleotides were used swithin the SMART and dT oligonucleotides were used sprimers to amplify the cDNA8 by PCR with pfu turbo polymerase (Stratagene). The resulting PCR products were purified, digested with Not1 and Sall and size fractionated by using Chroma Spin-1000 columns (Clontech). Purified cDNA from each PCR reaction was quantitated and mixed on an equimolar basis for ligation into the pCNV-SPORTG vector. Preliminary Library Characterization: Randomly chosen clones from each library est analyzed by restriction digestion to determine average insert size (96 clones) and by sequencing (~4 96-well plates) to confirm library quality [e.g. the presence of short polyA+ tails, genomic DNA contamination (must be <1%), ribosomal RNA clones (must be <1%), ribosomal RNA clones (must be <1%), ribosomal RNA clones (must be <1%), ribosomal plates; of his presenting the predominant clones in each libraries, equal numbers of recombinants from each library. The clones were sequenced at the University of the libraries. library were pooled to produce a single mixed library (mega-library) for more extensive sequencing.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 824, Application US/09878178

Patent No. US2002017552A1

GENERAL INFORMATION:

APPLICANT: Jiang, Yuqiu

APPLICANT: Jiang, Yuqiu

APPLICANT: Gecrist, Heather

TILLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY

TILLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY

TILLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY

TILLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY

TITLE OF INVENTION: COMPOSITION AND DIAGNOSIS OF COLON CANCER

FILE REFERENCE: 210121.527

CURRENT APPLICATION NUMBER: US/09/878,178

CURRENT PILING DATE: 2001-06-08

NUMBER OF SEQ ID NOS: 2237

SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                           Length 120;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Length 120;
                                                                                                                                                                                                                                                                                                                                                                                                                            Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Indels

Sequence 7516, Application US/09313294A

Patent No. 6476212

Patent No. 6476212

Patent No. 6476212

APPLICANT: Lalgudi, Raghunath V.

APPLICANT: Lalgudi, Raghunath V.

APPLICANT: Sherman, Baradley K.

TITLE OF INVENTION: POLYNUGLEOTIDES AND POLYPEPTIDES DERIVED FROM CORN EAR

FILLE REFERENCE: PL-0017 US

CURRENT APPLICATION NUMBER: US/09/313,294A

CURRENT FILING DATE: 1999-05-14

NUMBER OF SEQ ID NOS: 7600
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

New universal primers, mcb 398 and mcb 869, capable of amplifying a fragment of cytochrome b gene of any animal species, useful for establishing the identity of biological materials and animals for molecular evidence in forensics.

Claim 1; Page 116; 128pp; English.

The present invention describes universal primers, mcb 398 and mcb 869 (see ABQ81297 and ABQ83298), capable of amplifying a fragment of cytochrome b gene of any animal species in polymerase chain reaction (PCR) and revealing the identity of the biological material of any animal of unknown origin at species and sub-species level. Also described is a method for the identification of the animal from a biological sample. The method is used for animal identification to establish the crime with the criminal beyond a reasonable doubt, to establish the identity of

```
biological materials such as skin, horns confiscated from animal poachers, if it is that of an endangered species, for the purpose of molecular evidence of animal bunting and related crime in the court of law, so that human violation of the wildlife resources could be controlled, to have an idea of the geographical location of the commitment of wildlife crime based on the cytochrome b gene haplotype of poached animal identified by the universal primer invented, to detect the adulteration of animal meat in food products for the purpose of food fortification, by the food fortification agencies, to provide a universal crimingue for detection of the origin of blood or blood stains collected from the scene of the crime related to offenses such as murder and rape, in order to establish the origin of blood found at the scene of the crime origin of blood found at the scene of the crime in animal at the scene of the crime to confuse the crime investigators and forensic scientists with human blood, and so that the method can be converted to a commercial molecular kit and DNA chips based applications
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                converted to a commercial molecular kit a for wildlife identification in forensics

Warren WC; Tao N, Mathialagan N, Byatt JC,

WPI; 2003-110599/10.

New nucleic acid associated with lactation, and muscle and fat deposition, useful for genome mapping, gene identification and analysis, cattle breeding, or for genetically improving cattle.

Claim 2; SEQ ID NO 14288; 245pp; English.

The invention relates to a purified nucleic acid molecule associated with lactation or muscle and fat deposition (designated LMFD), derived from cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 15112 nucleotide sequences,

New nucleic acid associated with lactation, and muscle and fat deposition, useful for genome mapping, gene identification and analysis, cattle breeding, or for genetically improving cattle.

WPI; 2003-110599/10.

Claim 2; SEQ ID NO 6557; 245pp; English

cc appearing as ABX34836-ABX49947, or complements of them. Also included are cci acid linked to a promoter and a 3' non- translated sequence that cfunctions in the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and cc polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and cci (2) determining a level or pattern of a molecule in a bovine cell or tissue comprising: (a) incubating a marker nucleic acid (comprising any of the 15112 nucleic acid molecule obtained from the bovine cell or complementary nucleic acid molecule obtained from the bovine cell or crissue, where hybridisation between the marker nucleic acid and the ccomplementary nucleic acid molecule obtained from the bovine cell or complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the detecting the level or pattern of the complementary nucleic acid is used for determining a level or pattern of a molecule in a bovine cell or tissue. Cc level or pattern of complementary nucleic acid is used for determining a level or pattern of a molecule in a bovine cell or tissue. Cc for genetically improving cattle. The present sequence is one of the cci for genetically improving cattle. The present sequence is one of the cc sequence was not shown in the specification but was obtained in celectronic format from the USPTO web site:

cattle, and the LMRD nucleic acid molecule associated with lactation or muscle and fat deposition (designated LMRD), derived from cattle, and the LMRD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 15112 nucleotide sequences.

Concleic acid molecule comprising any of 15112 nucleotide sequences, appearing as ABX34836-ABX4937, or complements of them. Also included are if il a transformed cell having a nucleic acid comprising an LMRD nucleic acid linked to a promoter and a 3' non- translated sequence that functions in the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and control of polyadenylated ribonucleotides to a 3' end of the maching any configurating; (a) incubating a marker nucleic acid (comprising any of the 15112 nucleic acid sequences or its complementary nucleic acid sequences or its complementary nucleic acid molecule obtained from the bovine cell or complementary nucleic acid permits the detection of the molecule; and (b) detecting the level or pattern of the complementary nucleic acid, where the detection of the complementary nucleic acid is used for the detection of the molecule; TME LMPD nucleic acid is used for level or pattern of a molecule in a bovine cell or tissue. It is useful for genome mapping, gene identification and analysis, cattle
                                                                                                                                                                                                                                                                                                                                                                                                                                       It is useful for genome mapping, gene identification and analysis, cattle breeding, preparation of constructs for use in cattle gene expression, or for genetically improving cattle. The present sequence is one of the 15112 bovine LMFD EST (expressed sequence tag) nucleic acids. Note: The present sequence was not shown in the specification but was obtained in

The invention relates to a purified nucleic acid molecule associated with lactation or muscle and fat deposition (designated LMFD), derived from a cattle. And the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule acid can specifically hybridise to a second nucleic acid molecule comprising any of 1512 nucleotide sequences.

Complements as ABX34836-ABX49947, or complements of them. Also included are contained to a promoter and a 3 non-translated sequence that the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and cc of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and cc itssue comprising a level or pattern of a molecule in a bovine cell or tissue complementary nucleic acid molecule obtained from the bovine cell or tissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid molecule obtained from the bovine cell or tissue, the detection of the complementary nucleic acid predictive of the detection of the molecule. The LMFD nucleic acid is used for the detection of the molecule. The LMFD nucleic acid is used for complementary nucleic mattern of the molecule in a bovine cell or tissue. It is useful for genome mapping, gene identification and analysis, cattle conformation preparation of constructs for use in cattle gene expression, or for genetically improving cattle. The present sequence is one of the complement sequence was not shown in the present sequence was not shown in the present sequence is not shown in the present or pattern of shorters and analysis, and incomplement sequence was not shown in the present sequence is one the incomplement of shorters are not shown in the specification but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0;
New nucleic acid associated with lactation, and muscle and fat deposition, useful for genome mapping, gene identification and analysis, cattle breeding, or for genetically improving cattle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Bovine, ss; EST; expressed sequence tag; lactation; LMFD; muscle deposition; fat deposition; genome mapping; gene identification;

The invention relates to a purilled nucleic acid molecule absolutated with actuation or muscle and fat deposition (designated LMFD), derived from cattle, and the LMFD nucleic acid can specifically hybridise to a second molecule comprising any of 15112 nuclectide sequences.

The invention as ABX34836-ABX49947, or complements of them. Also included are appearing as ABX34836-ABX49947, or complements of them. Also included are in a transformed cell having a nucleic acid comprising an LMFD nucleic caid linked to a promoter and a 3, non- translated sequence that functions in the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and (2) determining a level or pattern of a molecule in a bovine cell or tissue complementary nucleic acid molecule obtained from the bovine cell or complementary nucleic acid molecule obtained from the bovine cell or tissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid molecule obtained from the bovine cell or tissue. The detection of the complementary nucleic acid is predictive of the complementary nucleic acid molecule. The LMFD nucleic acid is used for level or pattern of the molecule. The LMFD molecule caid is used for the complementary nucleic acid is used for the detection of the molecule. The LMFD molecule acid an analysis, cattle complementary profits and not an marker of the molecule in a bovine cell or tissue. The present sequence is one of the complementary profit and analysis, cattle complementary profit and profit acid some of the complementary profit and analysis, cattle complementary profit and molecule in a portine cell or the complementary profit and paint and the present sequence was not shown in the specification but was obtained in a part of part or pattern of a pattern of a pattern of a molecule and pattern of a molecule acid is present sequence and the marker page of the complementary profit and pattern of a molecule acid is predictive of the complementary 
                                                                                                                                                                                                                                                                                                                              The invention relates to a purified nucleic acid molecule associated with
                                                                                                                                       New nucleic acid associated with lactation, and muscle and fat deposition, useful for genome mapping, gene identification and analysis, cattle breeding, or for genetically improving cattle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score 25; DB 8; Length 380; Pred. and muscle and fat identification and analysis, deposition, useful for genome mapping, gene identific cattle breeding, or for genetically improving cattle New nucleic acid associated with lactation,

Claim 2; SEQ ID NO 1396; 245pp; English.

The invention relates to a purified nucleic acid molecule associated with lactation or muscle and fat deposition (designated LMFD), derived from cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 15112 nuclectide sequences, appearing as ABX34836-ABX49947, or complements of them. Also included are complements acid linked to a promoter and a 3 non-translated sequence that continued in the cell to cause termination of transcription and addition of polyadenylated ribonuclectides to a 3' end of the mRNA molecule; and complementary nucleic acid sequences or its complement or fragment in a bovine cell or tissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid molecule obtained from the bovine cell or tissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid permits the detection of the molecule; and (b) detecting the level or pattern of the complementary nucleic acid permits the detection of the molecule. The LMFD nucleic acid is used for the detection of the molecule. The LMFD nucleic acid is used for complementary nucleic acid permits the detection of the molecule. The LMFD nucleic acid is used for the molecule of the molecule in a bovine cell or tissue. It is useful for genome mapping, gene identification and analysis, cattle correction of the MFD EST (expressed sequence et al) nucleic acids. Note: The present sequence was not shown in the sequence cide in the context of the nucleus of the context of the molecule of the nucleus of the nucleus of the nucleus of the nucleus one of the context sequence was not shown in the sequence cides one of the nucleus of seqdata.uspto.gov/sequence.html?DocID=20020137139 format from the USPTO web site: electronic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      EXXXXX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ruciels acid molecule comprising any of 19112 incleolide sequences, appearing as ABX34836-ABX49947, or complements of them. Also included are (1) a transformed cell having a nucleic acid comprising an LMFD nucleic acid linked to a promoter and a 3' non- translated sequence that functions in the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and (2) determining a level or pattern of a molecule in a bovine cell or tissue comprising: (a) incubating a marker nucleic acid (comprising any of the 1512 nucleic acid molecule obtained from the bovine cell or cissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid molecule obtained from the bovine cell or itssue, where hybridisation between the marker nucleic acid, where the detection of the complementary nucleic acid permits the detection of the molecule. The LMFD nucleic acid is used for the detection of the molecule. The LMFD nucleic acid is used for determining a level or pattern of a molecule in a bovine cell or tissue. It is useful for genome mapping, gene identification and analysis, cattle for genetically improving cattle. The present sequence is one of the 1512 bovine LMFD BST (expressed sequence tag) nucleic acids. Note: The present sequence is some of in the money.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0
                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a purified nucleic acid molecule associated with lactation or muscle and fat deposition (designated LMFD), derived from cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 15112 nucleitide sequences,
                                                                                                                                                                                                                                                                                                    New nucleic acid associated with lactation, and muscle and fat deposition, useful for genome mapping, gene identification and analysis, cattle breeding, or for genetically improving cattle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Bovine; ss; EST; expressed sequence tag; lactation; LMFD; muscle deposition; fat deposition; genome mapping; gene identification; gene analysis; cattle breeding.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Bovine EST associated with lactation/muscle/fat deposition #12218.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ô

The invention relates to a purified nucleic acid molecule associated with catation or muscle and fat deposition (designated LMFD), derived from cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising an upper discally hybridise to a second are appearing as ABX34836-ABX49947, or complements of them. Also included are (i) in a transformed cell having a nucleic acid comprising an LMFD nucleic acid linked to a promoter and a 3 non- translated sequence that a cinctions in the cell to cause termination of transcription and addition of polyadenylated ribonuclectides to a 3 end of the mRNA molecule, and (2) determining a level or pattern of a molecule in a bovine cell or tissue comprising: (a) incubating a marker nucleic acid (comprising any complementary nucleic acid molecule obtained from the bovine cell or tissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid permits the detection of the molecule, and (b) detecting the level or pattern of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the detection of the molecule. The LMFD nucleic acid is used for the molecule or pattern of a molecule in a bovine cell or tissue. Complementary nucleic acid is predictive of the complementary nucleic acid is used for determining a level or pattern of a molecule in a bovine cell or tissue. Complementary nucleic acid is predictive of the complementary nucleic acid is bovine and snalysis, cattle for genetically improving cattle. The present sequence is one of the complement sequence was not shown in the specification but was obtained in pattern of present sequence is not shown in the specification but we apterned in
                                                                                                                                                                                                                                                                                                                                                                                                                     New nucleic acid associated with lactation, and muscle and fat deposition, useful for genome mapping, gene identification and analysis, cattle breeding, or for genetically improving cattle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

The invention relates to a purified nucleic acid molecule associated with lactation or muscle and fat deposition (designated LMPD), derived from cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 15112 nucleotide sequences.

(1) a transformed cell having a nucleic acid comprising an LMFD nucleic acid linked to a promoter and a 3' non-translated sequence that acid linked to a promoter and a 3' non-translated sequence that clunctions in the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and (2) determining a level or pattern of a molecule in a bovine cell or tissue comprising: (a) incubating a marker nucleic acid (comprising any of the 15112 nucleic acid sequences or its complement or fragment) with a complementary nucleic acid permits the detection of the molecule; and (b) detecting the level or pattern of the complementary nucleic acid permits the detection of the nucleic acid permits the detection of the complementary nucleic acid permits the detection of the level or pattern of the complementary nucleic acid permits for use complementary nucleic acid permits for use complementary nucleic acid permits for the detection of the molecule. The LMFD nucleic acid is used for the evel or pattern of the molecule in a bovine cell or tissue.

C determining a level or pattern of a molecule in a bovine cell or tissue. It is useful for genome mapping, gene identification and analysis, cattle C breeding, preparation of constructs for use in cattle gene expression, or for genetically improving cattle. The present sequence is one of the reader and mannalysis and incleic admits in the incleic admits in the molecule in a point in the incleic admits in the molecule in a molecule in a point in the incleic admits in the molecule in a point in the incleic admits in the molecule in a point in the incleic admits in the molecule in a point in the incleic admits in the molecule in a molecule in a mo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid associated with lactation, and muscle and fat deposition, useful for genome mapping, gene identification and analysis, cattle breeding, or for genetically improving cattle.
                        Bovine; 88; EST; expressed sequence tag; lactation; LMFD; muscle deposition; fat deposition; genome mapping; gene identification; gene analysis; cattle breeding.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cpressed sequence tag) nucleic acids. The invention relates to a purified nucleic acid molecule associated with lactation or muscle and fat deposition (designated LMFD), derived from cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 15112 nucleotide sequences.

C mucleic acid molecule comprising any of 15112 nucleotide sequences.

C that renafizationed cell having a nucleic acid comprising an LMFD nucleic acid linked to a promoter and a 3' non-translated sequence that c functions in the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and compensations a lincubating a marker nucleic acid (comprising any of the 15112 nucleic acid sequences or its complement or fragment) with a complementary nucleic acid molecule obtained from the bovine cell or tissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid permits the detection of the molecule; and (b) detecting the level or pattern of the complementary nucleic acid sequences or its complementary nucleic acid permits the detection of the molecule; and complementary nucleic acid sequence is nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the the detection of the molecule. The LMFD nucleic acid is used for the complementary nucleic acid is predictive of the complementary nucleic acid is predic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New nucleic acid associated with lactation, and muscle and fat deposition, useful for genome mapping, gene identification and analysis,

The invention relates to a purified nucleic acid molecule associated with lactation or muscle and fat deposition (designated LMFD), derived from cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 15112 nuclectide sequences, appearing as ABX34836-ABX493497, or complements of them. Also included are cid il a transformed cell having a nucleic acid comprising an LMFD nucleic acid linked to a promoter and a 3' non- translated sequence that functions in the cell to cause termination of transcription and addition of polyadenylated ribonuclectides to a 3' end of the mRNA molecule; and (2) determining a level or pattern of a molecule in a bovine cell or tissue comprising; (a) incubating a marker nucleic acid (comprising any of the 1512 nucleic acid sequences or its complement or fragment) with a complementary nucleic acid molecule obtained from the bovine cell or tissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid permits the detection of the molecule; and (b) detecting the level or pattern of the complementary nucleic acid is predictive of the level or pattern of the molecule. The LMFD nucleic acid is used for the detection of the molecule. The LMFD nucleic acid is used for determining a level or pattern of a molecule acid is predictive of the complementary nucleic acid is used for the detection of the molecule. The LMFD nucleic acid is used for the suseful for genome mapping, gene identification and analysis, cattle breach sequence was not shown in the specification but was obtained in present sequence was not shown in the specification but was obtained in the present sequence and in the specification but was obtained in the present sequence was not shown in the specification but was obtained in the present sequence and the best of the sequence was not shown in the specification but was obtained in a boven the lattern and the lattern an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic acid associated with lactation, and muscle and fat deposition, useful for genome mapping, gene identification and analysis, cattle breeding, or for genetically improving cattle.
                                                                                                                                                                                                                                             Bovine; ss; EST; expressed sequence tag; lactation; LMFD; muscle deposition; fat deposition; genome mapping; gene identification; gene analysis; cattle breeding.
                                                                                                                                                                                                   Bovine EST associated with lactation/muscle/fat deposition #4672.

carrie, and unitarious actual appointments of them. Also included are appearing as ABX34836-ABX49947, or complements of them. Also included are and in a transformed cell having a nucleic acid comprising an LMFD nucleic of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and (2) determining a level or pattern of a molecule in a bovine cell or tissue comprising; (a) incubating a marker nucleic acid (comprising any complementary nucleic acid molecule obtained from the bovine cell or complementary nucleic acid molecule obtained from the bovine cell or tissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid permits the detection of the molecule; and (b) detecting the level or pattern of the complementary nucleic acid permits the detection of the molecule; and complementary nucleic acid is predictive of the complementary nucleic acid is used for the detection of the molecule. The LMFD nucleic acid is used for complementary nucleic acid is predictive of the complementary nucleic acid is used for the detection of the molecule. The LMFD nucleic acid is used for the acet or pattern of a molecule in a bovine cell or tissue. It is useful for genome mapping, gene identification and analysis, cattle breading, preparation of constructs for use in cattle gene expression, or complement from the USPID web site:

15112 bovine LMFD EST (expressed sequence as) nucleic acids. Note: The present sequence was not shown in the specification but was obtained in collection and analysis. The invention relates to a purified nucleic acid molecule associated with lactation or muscle and fat deposition (designated LMFD), derived from cattle, and the LMFD nucleic acid can specifically hybridise to a second seqdata.uspto.gov/sequence.html?DocID=20020137139

Also included are acid linked to a promoter and a 3' non-translated sequence that functions in the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and to determining a level or pattern of a molecule in a bovine cell or tissue comprising: (a) incubating a marker nucleic acid (comprising any of the 1512 nucleic acid sequences or its complement or fragment) with a complementary nucleic acid meducule obtained from the bovine cell or tissue, where hybridisation between the marker nucleic acid and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              complementary incleic acid permits the detection of the molecule; and (b) detecting the level or pattern of the complementary nucleic acid, where the detection of the complementary nucleic acid, where level or pattern of the molecule. The LMFD nucleic acid is used for determining a level or pattern of a molecule in a bovine cell or tissue. It is useful for genome mapping, gene identification and malysis, cattle breeding, preparation of constructs for use in cattle gene expression, or for genetically improving cattle. The present sequence is one of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New nucleic acid associated with lactation, and muscle and fat deposition, useful for genome mapping, gene identification and analysis, cattle breeding, or for genetically improving cattle.

The invention relates to a purified nucleic acid molecule associated with lactation or muscle and fat deposition (designated IMPD), derived from cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 1512 nuclectide sequences, appearing as ABX34836-ABX49947, or complements of them. Also included are contained to a promoter and a 3 non-translated sequence that acid linked to a promoter and a 3 non-translated sequence that control or polyadenylated ribonuclectides to a 3' end of the mRNA molecule; and of polyadenylated ribonuclectides to a 3' end of the mRNA molecule; and comprising a level or pattern of a molecule in a bowine cell or tissue comprising: (a) incubating a marker nucleic acid (comprising any complementary nucleic acid molecule obtained from the bowine cell or tissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid molecule obtained from the bowine cell or tissue, there is nucleic acid molecule obtained from the molecule; and (b) detecting the level or pattern of the complementary nucleic acid, where the detection of the complementary nucleic acid, where the detection of the complementary nucleic acid, where the detection of the complementary nucleic acid, where
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New nucleic acid associated with lactation, and muscle and fat deposition, useful for genome mapping, gene identification and analysis, cattle breeding, or for genetically improving cattle.
15112 bovine LMFD EST (expressed sequence tag) nucleic acids. Note: The present sequence was not shown in the specification but was obtained in electronic format from the USPTO web site:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Bovine; ss; EST; expressed sequence tag; lactation; LMFD; muscle deposition; fat deposition; genome mapping; gene identification;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a purified nucleic acid molecule associated with lactation or muscle and fat deposition (designated LMFD), derived from cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 15112 nucleotide sequences, appearing as ABX34836-ABX49947, or complements of them. Also included are i, (1) a transformed cell having a nucleic acid comprising an LMFD nucleic acid linked to a promoter and a 3' non-translated sequence that functions in the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and (2) determining a level or pattern of a molecule in a bovine cell or tissue comprising; (a) incubating a marker nucleic acid (comprising any of the 15112 nucleic acid sequences or its complement or fragment) with a
level or pattern of the molecule. The LMFD nucleic acid is used for determining a level or pattern of a molecule in a bovine cell or tissue. It is useful for genome mapping, gene identification and analysis, cattle breeding, preparation of constructs for use in cattle gene expression, or for genetically improving cattle. The present sequence is one of the 15112 bovine LMFD EST (expressed sequence tag) nucleic acids. Note: The present sequence was not shown in the specification but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New nucleic acid associated with lactation, and muscle and fat deposition, useful for genome mapping, gene identification and analysis, cattle breeding, or for genetically improving cattle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Bovine; ss; EST; expressed sequence tag; lactation; LMFD; muscle deposition; fat deposition; genome mapping; gene identification; gene analysis; cattle breeding.
                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Bovine EST associated with lactation/muscle/fat deposition #11264.

ö
complementary nucleic acid molecule obtained from the bovine cell or tissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid permits the detection of the molecule; and (b) detecting the level or pattern of the complementary nucleic acid, where level or pattern of the complementary nucleic acid, where level or pattern of a molecule; a predictive of the level or pattern of a molecule in a bovine cell or tissue. It is useful for genome mapping, gene identification and analysis, cattle breeding, preparation of constructs for use in cattle gene expression, or for genetically improving cattle. The present sequence is one of the 15112 bovine LMFD EST (expressed sequence tag) nucleic acids. Note: The present sequence was not shown in the specification but was obtained in electronic format, from the USPTO web site:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence Sequence Sequence Sequence Sequence

Patent No. 6703491

GENERAL INFORMATION:

APPLICANT: Homburger et al.

TITLE OF INVENTION:

NULleic acids and proteins of Drosophila melanogaster FILE REFERENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NO 11513
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

New universal primers, mcb 398 and mcb 869, capable of amplifying fragment of cytochrome b gene of any animal species, useful for establishing the identity of biological materials and animals for molecular evidence in forensics.

Example 1; Page 28-57; 128pp; English.

The present invention describes universal primers, mcb 398 and mcb 869 (see AB083297 and AB083298), capable of amplifying a fragment of cytochrome b gene of any animal species in polymerase chain reaction (PCR) and revealing the identitity of the biological material of any animal of unknown origin at species and sub-species level. Also described is a method for the identification of the animal from a biological sample. The method is used for animal identification to establish the crime with the criminal beyond a reasonable doubt, to establish the identity of

The present invention describes universal primers, mcb 398 and mcb 869 (see ABQ83297 and ABQ83298), capable of amplifying a fragment of cytochrome b gene of any animal species in polymerase chain reaction (PCR) and revealing the identity of the biological material of any animal of unknown origin at species and sub-species level. Also described is a method for the identification of the animal from a biological sample. The method is used for animal identification to establish the crime with the

Claim 2; SEQ ID NO 9412; 245pp; English.

The invention relates to a purified nucleic acid molecule associated with lactation or muscle and fat deposition (designated LMFD), derived from

cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 15112 nucleotide sequences, appearing as ABX34836-ABX49947, or complements of them. Also included are idlined to a promoter and a3' non-translated sequence that acid linked to a promoter and a3' non-translated sequence that functions in the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and (2) determining a level or pattern of a molecule in a bovine cell or tissue comprising; (a) incubating a marker nucleic acid (comprising any complementary nucleic acid molecule obtained from the bovine cell or tissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid permits the detection of the molecule; and (b) detecting the level or pattern of the complementary nucleic acid is predictive of the complementary nucleic acid is used for determining a level or pattern of a molecule in a bovine cell or tissue. It is useful for genome mapping, gene identification and analysis, cattle or genemically improving cattle. The present sequence is one of the present sequence was not shown in the specification but was obtained in constructs for genemic form the USPTO web site: ö New nucleic acid associated with lactation, and muscle and fat deposition, useful for genome mapping, gene identification and analysis, cattle breeding, or for genetically improving cattle. ```
The invention relates to a purified nucleic acid molecule associated with lactation or muscle and fat deposition (designated LMFD), derived from a cattle LMFD nucleic acid can specifically Mybridise to a second nucleic acid molecule comprising any of 15:12 nuclectide sequences.

The inventor as ABX34836-ABX49947, or complements of them. Also included are complements as a partial and a sequence of the nucleic acid comprising an uncleic acid comprising an LMPD nucleic acid linked to a promoter and a 3, non-translated sequence that comprising in the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and comprising a level or pattern of a molecule in a bovine cell or tissue comprising; (a) incubating a marker nucleic acid (comprising any complementary nucleic acid sequences or its complement or fragment) with a complementary nucleic acid molecule obtained from the bovine cell or tissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid molecule obtained from the bovine cell or tissue to make the molecule. The LMFD nucleic acid is used for the detection of the complementary nucleic acid is used for the detection of the molecule. The LMFD nucleic acid is used for complementary nucleic acid permits the detection of constructs for use in cattle gene expression, or complementary proposed mapping, gene identification and analysis, cattle complementary proposed to the complementary sequence is one of the complementary sequence was not shown in the sequence eight one of the present sequence is one of the complement sequence was not shown in the specification but was obtained in a larger of the supermited for make them the molecules is a present and the sequence was not shown in the specification but was obtained in a larger of the supermited and the sequence of the supermited and the sequence as and the supermited and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Bovine, ss; EST; expressed sequence tag; lactation; LMFD; muscle deposition; fat deposition; genome mapping; gene identification; gene analysis; cattle breeding.
